Farmers for farmers through a century

Conference

Thursday 7th February 2008 – 9:30 am – 12:30 am
Fiera di Verona, Centrocongressi Europa, Sala Vivaldi

A hundred years ago, in 1908, in Italy the factories of Single Super Phosphate amount up to 80 units: today just 4 are still active. One of the few companies which succeeded in surviving the Italian fertiliser industry crisis is the “Fabbrica Cooperativa Perfosfati Cereale”, established in 1908 thanks to Verona cooperative movement in order to avoid any private industry influence.

In 19th century the science great advances had led to understand the plant nutrition mechanisms and the chemical industry followed accordingly in order to provide fertilisers essential to increase yields and feed a worldwide growing population.

The conference will remind the unique history of “Fabbrica Cooperativa Perfosfati Cereale”, as well as comment the role fertilisers have to play in our modern agriculture according to an environmentally friendly and sustainable way.

✓ **Introductory addresses**

Cav. Lav. Guido Finato Martinati, Presidente della Fabbrica Cooperativa Perfosfati Cereale

Dr. Narciso Salvo di Pietraganzili, Presidente di Assofertilizzanti

✓ **The Italian Single Super Phosphate industry**

Ing. Gianantonio Menin, Fabbrica Cooperativa Perfosfati Cereale

✓ **The history of the Fabbrica Cooperativa Perfosfati Cereale in the social and economic development of Verona area**

Prof. Andrea Ferrarese, Università degli Studi di Padova

✓ **The quality of fertilisers and their environmental impact**

Prof. Paolo Sequi, CRA–RPS, Roma

✓ **Tailor made fertilisers**

Prof. Marino Perelli, Università degli Studi di Verona
